

Overview

Augmented Software-Engineer Meetup

Roland Tritsch

01-Jan-2027

1 Description

In the next 3 years we all need to figure out how to become an Augmented Software Engineer. How to use AI to develop better systems faster and how to maintain large systems more efficiently.

Currently we all learn in isolation. That is sub-optimal. The goal of this meetup is to convene monthly gatherings where members can exchange knowledge about leveraging AI in software development and collectively devise strategies for rapid, effective learning on the topic.

More background: The Augmented Software Engineer - What is it?

The community began in November 2024 and held its inaugural meetup in January 2025.
